July 12, 2024

WHEAT: The outlook for 2024/25 U.S. wheat this month is for larger supplies, domestic use, exports, and ending stocks. Supplies are raised on increased wheat production and beginning stocks. All wheat production is raised 134 million bushels to 2,008 million, on an increase in harvested area and higher yields. The first 2024 survey-based production forecasts for other spring wheat and Durum indicated an increase from last year for both classes at 578 million and 89 million bushels, respectively. Winter wheat production is also forecast higher at 1,341 million bushels on an increase in harvested area and yields. Beginning stocks are raised on the June 1 stocks reported in NASS *Grain Stocks*. Imports are lowered 15 million bushels to 105 million. Feed and residual use is increased 10 million bushels to 110 million on larger supplies. With larger supplies, exports are raised 25 million bushels to 825 million. Projected 2024/25 ending stocks are raised 98 million bushels to 856 million, up 22 percent from last year and the highest in five years. The projected 2024/25 season-average farm price is reduced \$0.80 per bushel to \$5.70 on higher stocks, recent declines in futures and cash prices, and lower projected U.S. corn prices.

The global wheat outlook for 2024/25 is for larger supplies, consumption, trade, and stocks. Supplies are increased 6.9 million tons to 1,057.2 million, primarily on larger beginning stocks for several countries and higher production, mainly for the United States, Pakistan, and Canada. Pakistan's production forecast is raised 1.4 million tons to a record 31.4 million, based on government estimates indicating a large yield. Canada's production is increased 1.0 million tons to 35.0 million on improved moisture conditions in the Prairie Provinces. Global consumption is raised 1.9 million tons to 799.9 million on higher food, seed, and industrial use and feed and residual use for several countries. World trade is virtually unchanged at 212.9 million tons as higher exports for the United States, Canada, and Pakistan are nearly offset by reductions for the EU, Turkey, and Uzbekistan. Projected 2024/25 global ending stocks are raised 5.0 million tons to 257.2 million, mostly on increases for the United States, China, Argentina, Pakistan, and Canada more than offsetting reductions for Russia, the EU, and Iran.

COARSE GRAINS: This month's 2024/25 U.S. corn outlook is for larger supplies, greater domestic use and exports, and slightly lower ending stocks. Corn beginning stocks are lowered 145 million bushels, mostly reflecting a greater use forecast for 2023/24. Exports are raised 75 million bushels based on current outstanding sales and shipments to date. Feed and residual use is up 75 million bushels based on indicated disappearance in the June *Grain Stocks* report. Corn production for 2024/25 is forecast up 240 million bushels on greater planted and harvested area from the June *Acreage* report. The yield is unchanged at 181.0 bushels per acre. Total use is raised 100 million bushels with increases to both feed and residual use and exports based on larger supplies and lower expected prices. With use rising slightly more than supply, ending stocks are down 5 million bushels. The season-average farm price received by producers is lowered 10 cents to \$4.30 per bushel.

Oats production is forecast up 15 million bushels reflecting higher area in the *Acreage* report and an increase in yield to a record 70.9 bushels per acre in today's *Crop Production* report. Barley

production is lowered 11 million bushels on fractionally lower area in the *Acreage* report and a cut in yield to 74.2 bushels per acre in today's *Crop Production* report. Sorghum production is reduced 15 million bushels based on the lower area reported in the *Acreage* report.

Global coarse grain production for 2024/25 is forecast 1.2 million tons higher to 1.512 billion. This month's 2024/25 foreign coarse grain outlook is for lower production and use, and larger stocks relative to last month. Foreign corn production is reduced based on declines for the EU, Canada, and Russia. Canada is down based on lower area. For the EU and Russia, extreme early-season heat in southeastern Europe and the Southern and North Caucasus districts of Russia reduce yield prospects. For 2023/24, corn production is lowered for Argentina, Pakistan, Mexico, and the Philippines. Foreign barley production for 2024/25 is down with cuts for Canada, the EU, and Russia.

Major global trade changes for 2024/25 include larger corn exports for the United States with reductions for Russia and the EU. Corn imports are raised for Canada and Mexico but lowered for Iran and Bangladesh. For 2023/24 corn exports are raised for Ukraine and the United States but lowered for Argentina, Pakistan, and India. Foreign corn ending stocks for 2024/25 are higher, with increases for Pakistan, Mexico, and Turkey partly offset by a decline for Ukraine. Global corn stocks, at 311.6 million tons, are up 0.9 million.

RICE: The outlook for 2024/25 U.S. rice this month is for increased supplies, unchanged domestic use, and larger exports and ending stocks. All rice supplies are raised 2.5 million cwt to 307.0 million on increased production and imports. All rice production is projected up slightly at 221.7 million cwt, on higher harvested area indicated in the NASS *Acreage* report issued June 28. The all rice yield is increased to 7,645 pounds per acre, up 10 pounds from last month, with the relatively higher yielding medium- and short-grain rice accounting for a larger share of total harvested area than previously forecast. Total imports are forecast up 1.0 million cwt to a record 45.5 million as current historically large imports of Asian aromatic long-grain rice are forecast to continue, primarily from Thailand. Total exports are projected higher at 101.0 million cwt on larger supplies. All rice endings stocks for 2024/25 are projected higher at 46.0 million cwt, up 16 percent from the prior year. No changes were made to the 2024/25 season-average farm prices.

The 2024/25 global rice outlook is for higher supplies, consumption, trade, and stocks. World supplies are increased by 0.9 million tons to 705.4 million, mostly on a record production forecast for Pakistan where yields are boosted based on good planting conditions and water availability. Global 2024/25 rice consumption and residual use is projected at a record 527.3 million tons, up 0.8 million from last month, with increases for Pakistan and the Philippines. World trade is projected at 54.6 million tons, up 0.7 million mostly on higher exports from Pakistan. Projected 2024/25 world ending stocks are 178.1 million tons, up only slightly this month.

OILSEEDS: U.S. oilseed production for 2024/25 is projected at 131.5 million tons, up 0.3 million from last month, with increases for rapeseed, peanuts, and cottonseed partly offset by reductions for soybeans and sunflowerseed. Soybean production is projected at 4.4 billion bushels, down 15 million on lower harvested area. Harvested area, forecast at 85.3 million acres in the June *Acreage* report, is down 0.3 million from last month. The soybean yield forecast is unchanged at 52.0 bushels per acre. With slightly lower beginning stocks, reduced production, and unchanged use, ending stocks for 2024/25 are projected at 435 million bushels, down 20 million from last month.

The U.S. season-average soybean price for 2024/25 is forecast at \$11.10 per bushel, down \$0.10 from last month. Soybean meal and oil prices are unchanged, at \$330 per short ton and 42 cents per pound, respectively.

Foreign oilseed production for 2024/25 is reduced slightly on lower sunflowerseed output mostly offset by higher rapeseed. Sunflowerseed production is reduced on lower yield prospects for Russia and Ukraine due to hot and dry weather conditions early in the season. Foreign rapeseed production is increased for Canada and the EU. Foreign soybean production is unchanged with higher production for Canada offset by lower production for Russia.

Global soybean beginning stocks for 2024/25 are increased slightly, with higher stocks for China mainly offset by lower stocks for Argentina, Brazil, and Paraguay due to revisions for 2023/24. Argentina's soybean production for 2023/24 is revised down 0.5 million tons to 49.5 million guided by data from Argentina's Ministry of Agriculture, Livestock and Fisheries. China's soybean imports for 2023/24 are revised up 3.0 million tons to 108.0 million on larger-than-anticipated arrivals expected in the fourth quarter of the marketing year. Exports for Argentina, Brazil, Paraguay, Benin, and Canada are also raised for 2023/24.

With slightly higher beginning stocks, lower global production, and relatively small changes to use in 2024/25, global soybean stocks are reduced 0.1 million tons to 127.8 million on lower stocks for Argentina, Brazil, Paraguay, Russia, the EU, and the United States, mostly offset by higher stocks for China.

SUGAR: U.S. sugar supply for 2023/24 is increased 304,831 short tons, raw value (STRV) to 14.682 million on increases in production and imports. With the end of beet slicing in all regions except California, USDA has adopted beet processor estimates of production from slice at 4.882 million STRV. With a small reduction in beet sugar from desugared molasses, beet production for the fiscal year is estimated at 5.179 million STRV, an increase of 133,781. Cane sugar production in Florida is increased by 5,791 STRV on processors' SMD reporting. Imports are increased by 165,259 STRV to 3.619 million. High-tier tariff imports are increased 115,000 STRV on the strong pace through early July. Raw high-tier for the year is estimated at 700,000 STRV and refined is at 270,000 STRV. Sugar from imported molasses used as refiners' melt input is estimated at 58,899 STRV, up 11,753, mostly on a revision of a technical conversion factor. Imports from Mexico are increased 38,506 STRV, as a proportion of early season imports were from 2022/23 production in Mexico. Sugar use is increased 42,912 STRV on the strong pace of exports to Mexico. Residually estimated ending stocks increase to 1.986 million STRV implying an ending stocks-to-use ratio of 15.6 percent.

U.S. sugar supply for 2024/25 is increased 249,972 STRV on a combined increase in beginning stocks and beet sugar production more than offsetting a reduction in imports. Beet sugar production is projected at 5.236 million STRV. This is a 124,816-STRV increase due to an increase in area harvested relative to June, an increase in national yield from early planting, and an increase in sugar from desugared molasses due to expansion of capacity. Program imports are increased 231,485 STRV due to the announced setting of the additional specialty TRQ. High-tier/other imports are increased 38,753 STRV to 301,899. High-tier tariff imports are at 243,000 STRV and sugar from imported molasses is at 58,899 STRV. These increases in imports are more than offset by a reduction in imports from Mexico under provisions of the CVD Suspension Agreement based on U.S. Sugar Needs. There are no changes in use. Ending stocks are projected at 1.695 million STRV for an ending stocks-to-use ratio of 13.50 percent.

Mexico sugar supply for 2023/24 is increased by larger imports only marginally reduced by a small decrease in production from last month. Imports for consumption are increased by 114,000 metric tons (MT) on strong entries occurring in May, and imports for IMMEX are increased 36,700 MT due to expected shipments into the program from the United States for the rest of the year. As was assumed last month, ending stocks are expected to be carried over to 2024/25 given poor production expected in 2024/25 relative to the recent period before 2023/24.

Mexico exports for 2024/25 are reduced from last month to 708,420 MT on a large decrease of exports into the U.S. market resulting from the terms of the CVD Suspension Agreement. With some small exports to other countries, the decrease in exports to the United States of 348,325 MT obviates the need for imports in 2024/25 except for 25,000 MT imported for IMMEX.

LIVESTOCK, POULTRY, AND DAIRY: The total U.S. red meat and poultry production forecast for 2024 is lowered slightly from last month with lower forecast broiler and turkey production more than offsetting higher beef and pork. Pork production is raised this month based on increased weights for the second half of the year. Beef production is raised with higher expected steer and heifer slaughter more than offsetting reduced cow slaughter. Broiler production is lowered on slaughter data for the second quarter. Turkey production is lowered due to reduced expectations for the second half of the year based on recent production and hatchery data. The egg production forecast is unchanged with offsetting changes to table and hatching eggs. For 2025, beef production is raised on higher expected steer and heifer slaughter, partially offset by lower cow slaughter. Pork production is raised reflecting stated producers' farrowing intentions for the second half of 2024 reported in the June *Quarterly Hogs and Pigs* report and expectations of modest growth in the first-half 2025 pig crop. Broiler production is lowered based on a slower rate of growth in first-quarter production. Turkey production is lowered as expected weaker producer returns for the remainder of 2024 slow growth in 2025. Egg production is unchanged.

Beef imports for 2024 are reduced on expected global competition. Beef exports are raised on stronger-than-expected demand in a number of key markets. There are no changes to beef trade forecasts for 2025. Pork exports are lowered for 2024 based on recent trade data. The pork export forecast for 2025 is unchanged. The 2024 broiler export forecast is raised slightly, reflecting recent trade data. No changes are made to broiler exports in 2025. The turkey export forecast for 2024 is lowered on recent trade data. Turkey exports for 2025 are raised on expected improved demand.

For 2024, cattle prices are raised on recent price data and expectations that demand for fed cattle will remain firm. This price strength is expected to carry into 2025, with raised price forecasts. Hog price forecasts in 2024 are lowered based on recent price data. Lower prices for hogs are carried into 2025. Broiler price forecasts are lowered slightly for 2024 based on recent price data; the forecast for 2025 is unchanged. Turkey price forecasts for 2024 are lowered based on recent data; Turkey price forecasts for 2025 are raised however, based on the expectation of tighter supplies.

The milk production forecast for 2024 is lowered from last month, based on slower growth in milk per cow more than offsetting higher cow numbers. The milk production forecast for 2025 is also reduced from last month, as slower growth in milk per cow more than offsets a larger cow inventory.

For 2024, commercial exports are raised on a fat basis but lowered on a skim-solids basis. The higher fat basis exports primarily reflect increased butter and cheese shipments. The reduction in skim-solids basis exports reflects lower nonfat dry milk (NDM) and lactose. For 2025, commercial exports are reduced on both a fat basis and a skim-solids basis. For 2024, fat basis imports are raised based on higher expected imports of butter and butterfat products. On a skim-solids basis, imports are lowered on a number of products. For 2025, imports are unchanged on a fat basis but reduced on a skim-solids basis.

For 2024, prices of cheese, butter, NDM, and whey are raised from the previous month's forecast based on recent price strength and an expectation of tighter milk supplies. The Class III and

Class IV price forecasts are raised on the higher dairy product prices. The all milk price forecast is raised to \$22.25 per cwt.

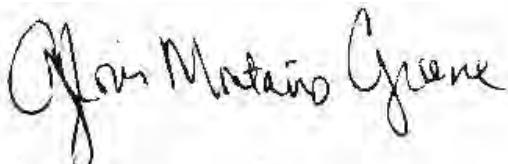

With tighter milk supplies, the stronger prices forecast for 2024 are expected to carry over into 2025. Butter, cheese, NDM, and whey prices are all increased from last month's forecast. The Class III and Class IV milk prices are raised based on higher product prices. The all milk price forecast is raised to \$22.50 per cwt.

COTTON: The July U.S. cotton projections for 2024/25 show higher acreage, production, and beginning and ending stocks compared to last month. Projected domestic use and exports are unchanged. U.S. planted area is 1 million acres higher, as indicated in the June *Acreage* report, leading to a 1-million-bale increase in the crop projection to 17.0 million bales. Ending stocks are 1.2 million bales higher at 5.3 million, or 36 percent of use, primarily due to the larger projected crop. The 2024/25 season average upland farm price is reduced 2 cents from the June forecast to 68 cents per pound. Revisions to the 2023/24 U.S. cotton balance sheet include a 200,000-bale reduction in exports to 11.6 million based on the slowing pace of export shipments and a corresponding 200,000-bale increase in ending stocks.

For the global 2024/25 cotton balance sheet, production and consumption are increased, while beginning stocks and world trade are reduced. Beginning stocks are 1.7 million bales lower compared to June with India accounting for a large portion of the reduction. The forecast for global production is raised 1.1 million bales to 120.2 million, largely due to higher forecasted production for the United States. Consumption is 250,000 bales higher with increases in India and Malaysia offsetting reductions elsewhere. As a result, world ending stocks are reduced 860,000 bales from June to 82.6 million. Revisions to the 2023/24 world balance sheet include lower beginning stocks and higher consumption, resulting in a 1.7-million-bale reduction in ending stocks.

Approved by the Secretary of Agriculture and by the Chairman of the World Agricultural Outlook Board, Mark Jekanowski, (202) 720-6030. This report was prepared by the Interagency Commodity Estimates Committees.

Note: Totals may not add due to rounding. 1/ Marketing year beginning August 1. 2/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of ending stocks by type (in mil. cwt): 2020/21-2.5; 2021/22-2.0; 22/23- 2.3. 3/ Residual includes unreported use, processing losses, and estimating errors. Use by type may not add to total rice use because of the difference in breakens between beginning and ending stocks. 4/ Includes rough rice and milled rice exports. Milled rice exports are converted to an equivalent rough basis. 5/ Expressed as a percent, i.e., the total quantity of whole kernel and broken rice produced divided by the quantity of rough rice milled. 6/ Marketing-year weighted average price received by farmers. 7/ Includes imports. 8/ Exports by type of rice are estimated. 9/ The California medium/short-grain season-average- farm price (SAFP) largely reflects rice that is marketed through price pools in California. The pool price is not final until all the rice in the pool is marketed for the crop year. Therefore, SAFP forecasts based on the average of NASS monthly prices and the final price may differ. 10/ Marketing year beginning October 1. * For June--Planted acres reported in March 28, 2024, "Prospective Plantings." Harvested acres are estimated using long run harvested-to-planted ratios by rice class. For July--Planted and harvested area are reported in June 28, 2024 "Acreage" report. Projected yield is based on by-class trend analysis and planted area.

Note: Totals may not add due to rounding. Reliability calculations at end of report. 1/ Marketing year beginning September 1 for soybeans; October 1 for soybean oil and soybean meal. 2/ Prices: soybeans, marketing year weighted average price received by farmers; oil, simple average of crude soybean oil, Decatur; meal, simple average of 48 percent protein, Decatur. 3/ Reflects soybean oil used for biofuels as reported by the U.S. Energy Information Administration. 4/ Based on an October year crush of 2,290 million bushels for 2023/24 and 2,425 million bushels for 2024/25. *Planted acres are reported in the March 28, 2024 Prospective Plantings report. Harvested acres are based on historical planted-to-harvested ratios. **Planted and harvested acres are from the June 28, 2024 Acreage report. The projected yield is based on a weather-adjusted trend model.

Dry Whey	0.6057	0.3618	0.435	0.440	0.400	0.425
<i>Dollars Per Pound</i>						
Milk Prices 2/						
Class III	21.96	17.02	17.90	18.25	17.70	18.45
Class IV	24.47	19.12	20.50	20.75	20.10	20.60
All Milk 3/	25.34	20.34	21.60	22.25	21.50	22.50
<i>Dollars Per Cwt</i>						

All prices are January-December averages. 1/ Simple average of monthly prices calculated by AMS from weekly average dairy product prices for class price computations. 2/ Annual Class III and Class IV prices are the simple averages of monthly minimum Federal order milk prices paid by regulated plants for milk used in the respective classes. All milk price is the simple average of monthly prices received by farmers for milk at average test. 3/ Does not reflect any deductions from producers as authorized by legislation.

Reliability of July Projections 1/

Note: Tables on pages 35-37 present a record of the July projection and the final Estimate. Using world wheat production as an example, the "root mean square error" means that chances are 2 out of 3 that the current forecast will not be above or below the final estimate by more than 2.7 percent. Chances are 9 out of 10 (90% confidence level) that the difference will not exceed 4.5 percent. The average difference between the July projection and the final estimate is 13.9 million tons, ranging from 1 million to 34.6 million tons. The July projection has been below the estimate 25 times and above 18 times.

1/ See pages 35 and 36 for record of reliability for U.S. wheat, rice, soybeans, and cotton. Marketing years 1981/82 through 2023/24 for grains, soybeans, and cotton. Final for grains, soybeans, and cotton is defined as the first November estimate following the marketing year for 1981/82 through 2023/24. Calendar years 1994 through 2023 for meats, eggs, and milk. Final for animal products is defined as the latest annual production estimate published by NASS for 1994-2023.

Related USDA Reports

The *WASDE* report incorporates information from a number of statistical reports published by USDA and other government agencies. In turn, the *WASDE* report provides a framework for more detailed reports issued by USDA's Economic Research Service and Foreign Agricultural Service. For more information on how the *WASDE* report is prepared, go to: <http://www.usda.gov/oce/commodity/wasde>.

Supply and Demand Database

The Foreign Agricultural Service publishes Production, Supply, and Demand Online, a comprehensive database of supply and demand balances by commodity for 190 countries and regions at <https://apps.fas.usda.gov/psdonline/app/index.html>. Data for grains, oilseeds, and cotton are updated monthly and data for other commodities are updated less frequently.

Foreign Production Assessments

Preliminary foreign production assessments and satellite imagery analysis used to prepare the *WASDE* report are provided by the International Production Assessment Division (IPAD) of the Foreign Agricultural Service. IPAD is located at <https://ipad.fas.usda.gov/>.

Metric Conversion Factors

1 Hectare = 2.4710 Acres

World Agricultural Supply and Demand Estimates

WASDE-650 – July 12, 2024

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 1400 Independence Avenue, SW, Washington, D.C. 20250-9410 or call (202) 720-5964 (voice or TDD). USDA is an equal opportunity provider and employer.
